

Phase 2 Wireframes

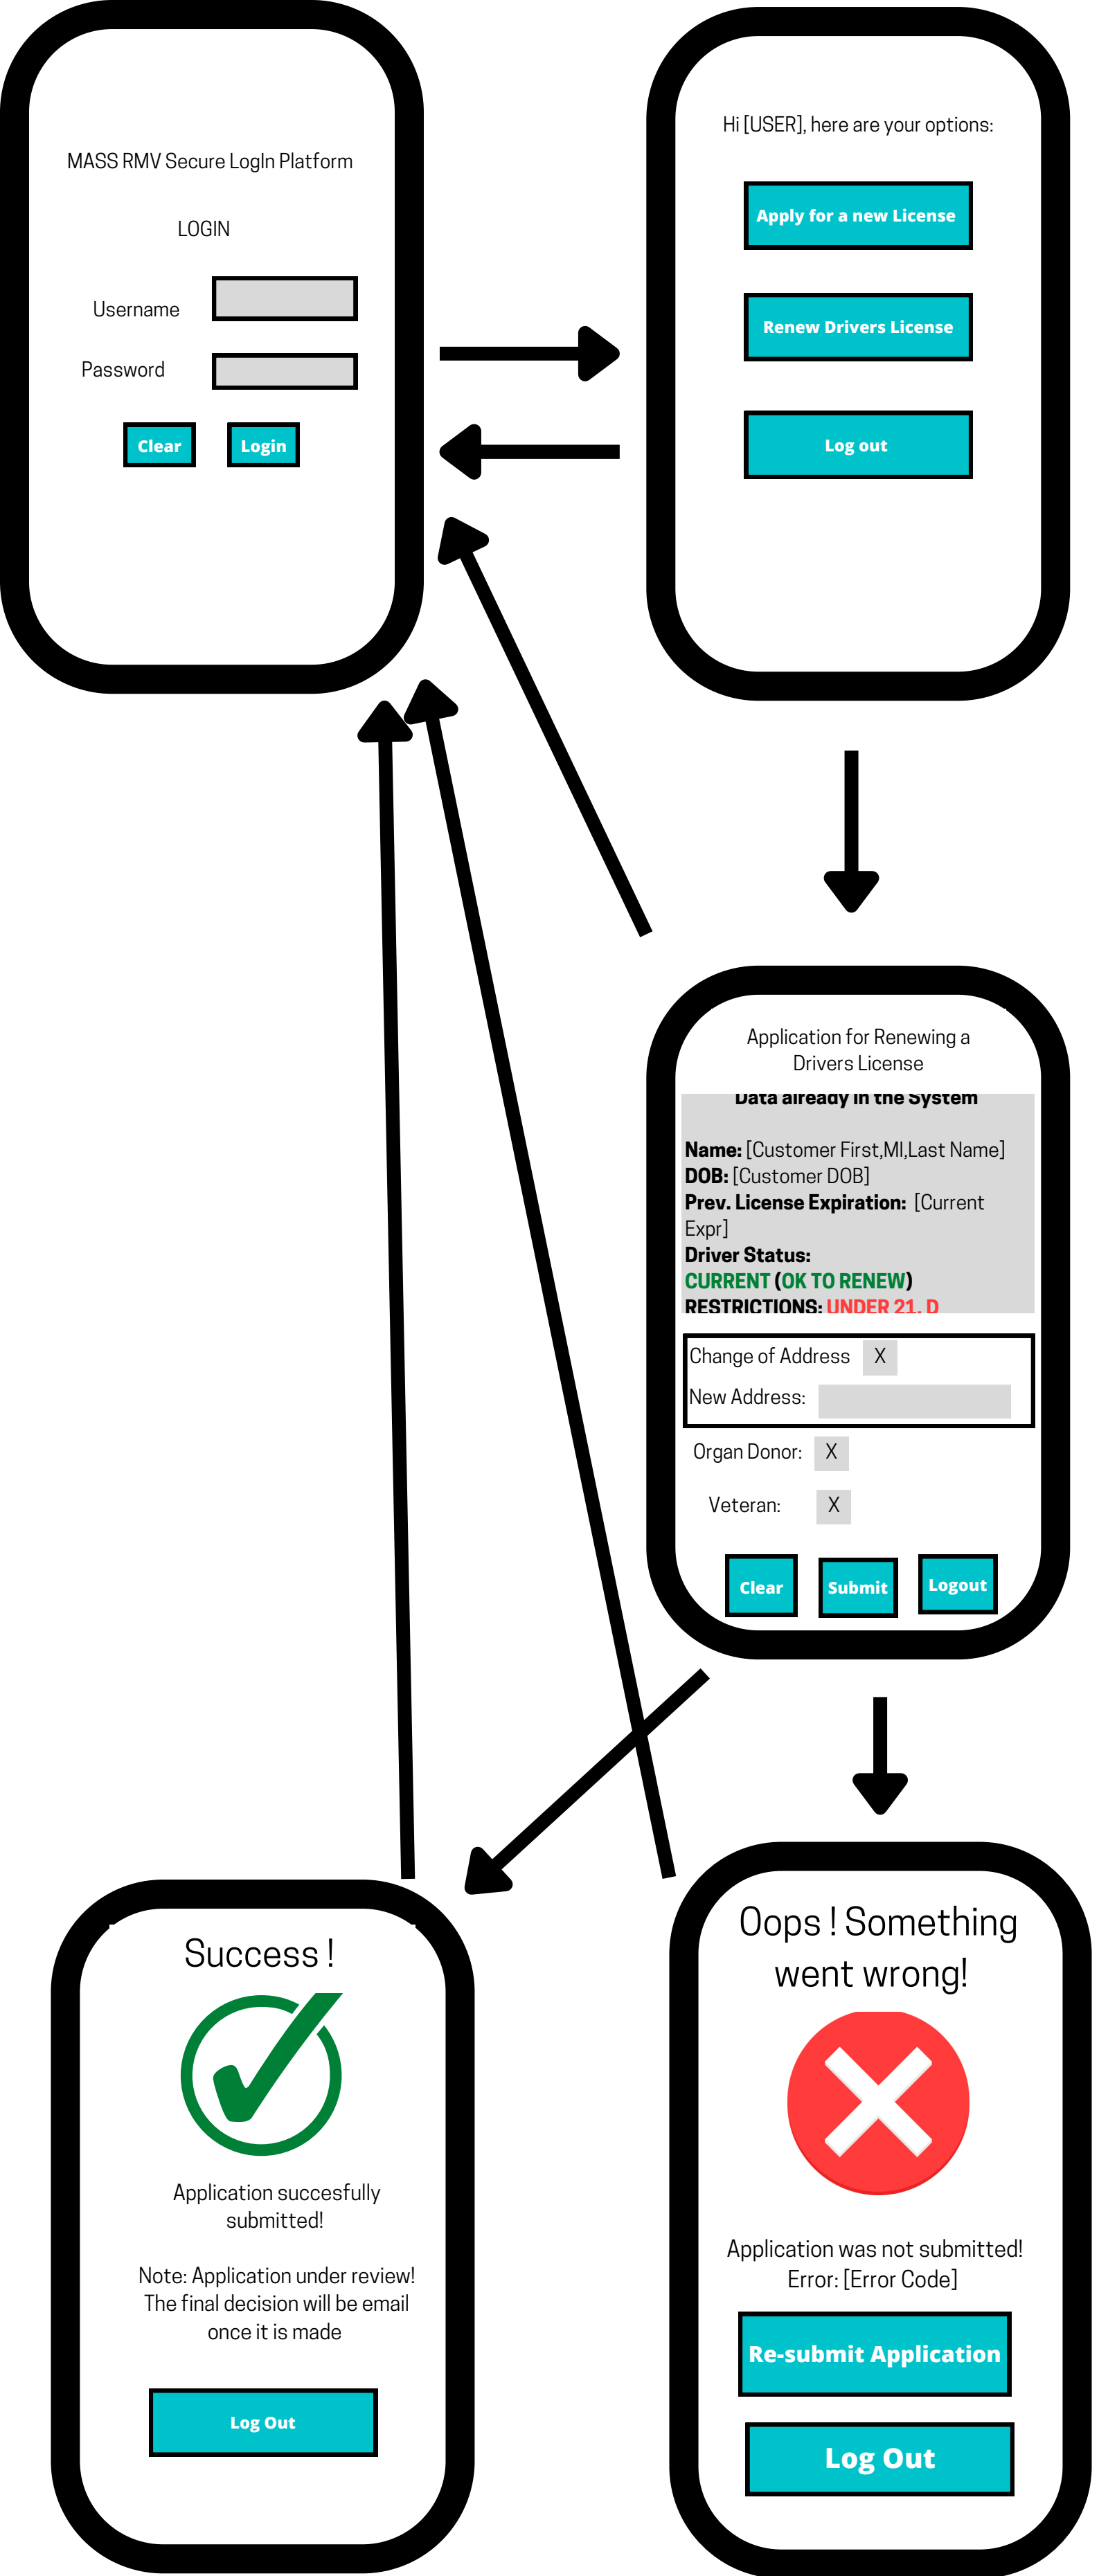

Disclaimers and description of the Wireframes:

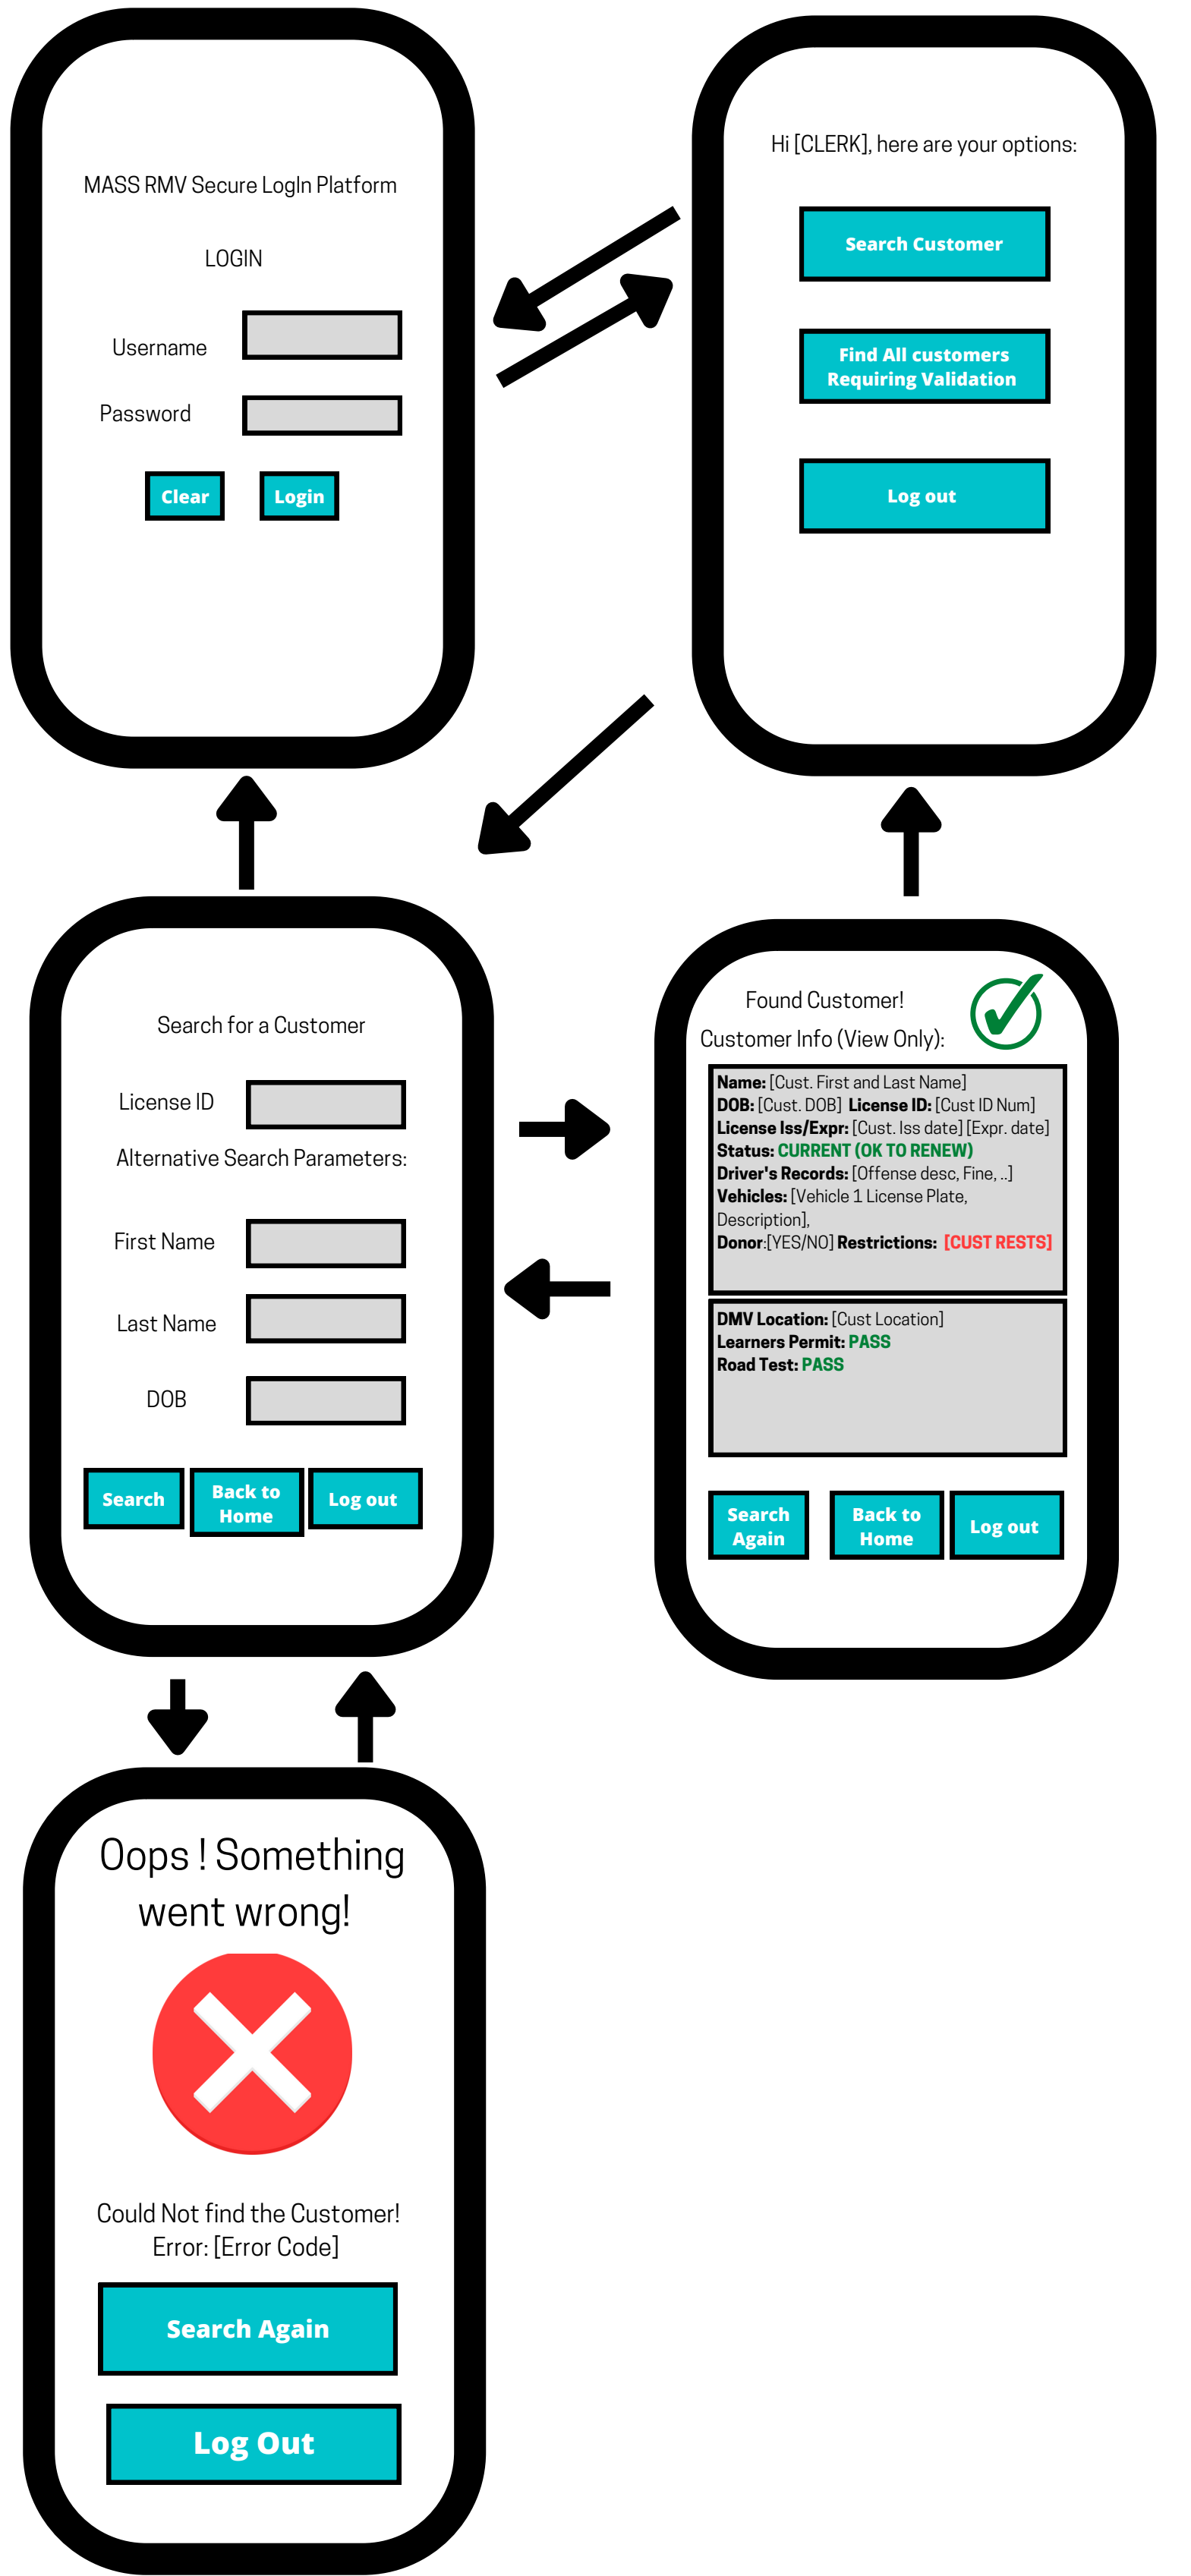

The wireframes describe the following actions that the different personas can take:

1. This Wireframe describes the action taken by the Persona "User" in order to apply for their first drivers license (sign-in + form + confirmation message).
2. This Wireframe describes the action taken by the Persona "User" in order to renew their license (sign in + home + a screen where the info is displayed and allows the user to make selected changes before submission + confirmation message)
3. This wireframe describes the action taken by the Persona "Clerk" in order to search for a particular user within the database.
4. This wireframe describes the action taken by the Persona "Clerk" in order to approve/deny applications according to the necessary information provided from the database
5. This wireframe describes the action taken by the Persona "System Admin" in order to test any of the pieces of functionality described above. In this case, it is worth mentioning that all of the buttons in this wireframe would allow the system admin to perform the actions described above for testing/debugging purposes since it has access to the database beyond this GUI.

The Format of these might seem like it is intended for a mobile phone app. However, in reality this is due to space constraints and it is intended to represent the actual web-app made using Flask. Thus, the information of the actual end-product of this project would reflect the information (subject to change) presented in these wireframes but with the appropriate resolution of a computer/bigger screen. Subsequently, the format of the buttons and other objects in this GUI are subject to change. Again, the information presented and actions will remain untouched (given that there are no changes in the ER Diagrams and/or SQL code).
